

CLAIM AMENDMENTS

Claim Amendment Summary

Claims pending

- Before this Amendment: Claims 1-20.
- After this Amendment: Claims 1-6, and 8-20

Non-Elected, Canceled, or Withdrawn claims: 7

Amended claims: 1, 2, 8-10, 14 and 20

New claims: none

Claims:

- 1. (Currently Amended)** A computer-readable medium having computer-executable components, comprising:

a body of code that includes a public static function call that operates to cause the body of code to be hosted in a first hosting environment, the absence of the public static function call being operative to cause the body of code to be hosted in a second hosting environment.
- 2. (Currently Amended)** The computer-readable medium of claim 2 1, wherein the body of code comprises an executable file.
- 3. (Original)** The computer-readable medium of claim 1, wherein the function, when compiled, results in a byte signature within an executable code, the byte signature being indicative of the function call.

4. (Original) The computer-readable medium of claim 1, wherein the first hosting environment comprises a browser hosting environment.

5. (Original) The computer-readable medium of claim 4, wherein the second hosting environment comprises a standalone hosting environment

6. (Original) The computer-readable medium of claim 1, wherein the first hosting environment comprises a standalone hosting environment.

7. (Canceled) The computer-readable medium of claim 1, wherein the function comprises a public static function that, when called, results in the body of code being hosted in the first hosting environment.

8. (Currently Amended) The computer-readable medium of claim 7 1, wherein the public static function is called from within a public class included in the body of code.

9. (Currently Amended) A computer-readable medium having computer-executable components, comprising:

an executable file, comprising:

a first portion including computer-executable instructions operative for performing operations; and

a second portion including a public static function call which, when invoked, is operative to cause the executable file to be executed in an alternative hosting environment.

10. (Currently Amended) The computer-readable medium recited in claim 9, wherein failing to invoke the public static function call is operative to cause the executable file to be executed in a default hosting environment.

11. (Original) The computer-readable medium recited in claim 10, wherein the alternative hosting environment comprises a browser hosted environment and the default hosting environment comprises a standalone hosting environment.

12. (Original) The computer-readable medium recited in claim 9, wherein the alternative hosting environment comprises a browser hosted environment.

13. (Original) The computer-readable medium recited in claim 9, wherein the alternative hosting environment comprises a standalone hosting environment.

14. (Currently Amended) A computer-executable method of hosting an executable file in a hosting environment, the method comprising:

providing a shell environment that is operative to launch the executable file in a default hosting environment common to other executable files; and

providing a public static function that, if called by the executable file, is operative to cause the executable file to be launched in an alternative hosting environment.

15. (Original) The computer-executable method recited in claim 14, wherein the default hosting environment comprises a standalone hosting environment.

16. (Original) The computer-executable method recited in claim 15, wherein the alternative hosting environment comprises a browser hosted environment.

17. (Original) The computer-executable method recited in claim 14, wherein the default hosting environment comprises a browser hosted environment.

18. (Original) The computer-executable method recited in claim 17, wherein the alternative hosting environment comprises a standalone hosting environment.

19. (Original) The computer-executable method recited in claim 14, wherein the function comprises a public static function.

20. (Currently Amended) The computer-executable method recited in claim 14, wherein the executable file is configured for execution in either the default hosting environment or the alternative hosting environment, and wherein the a determination of whether to launch the executable file in either the default hosting environment or the alternative hosting environment is based substantially exclusively on the executable file being configured to call the function.
